Majority milling work shall be done with a self-propelled grinding machine capable of removing approximately 6 ft. of material in a single pass at a depth ranging from 1 to 2 inches. Unless otherwise noted, all milling shall be done to an average depth of 1 ½ inches. At adjoining concrete curbs, at least 1 ¼ inches of concrete shall be visible after milling is complete. All millings must be removed immediately from the pavement and must not be allowed to remain on the street more than one (1) hour. Care must be taken to avoid damaging manhole lids, water and gas valves, etc.

As such, some chipping by use of a jackhammer may be required. The areas milled will not be the exact same as the areas overlaid.

At all street ends, a vertical butt joint 6' or 12' wide shall be cut to provide a smooth transition to the original pavement.

Millings shall belong to the Town and will be hauled and dumped by the Contractor to a location no more than three (3) miles from site of project.

Sweeping.

All surfaces to be overlaid shall be swept clean after the milling and again immediately prior to the placement of the final asphalt surface. Sweeping shall include the removal of mud, dirt, rocks, debris, and may require scraping. The sweeping must pick up the debris from the surface and not merely blow it onto adjacent yards. Payment will be on a lump sum basis for the estimated length of street paving.

Primer.

The cleaned streets shall receive a tack coat at an approximate rate of (.05) gallon per square yard immediately prior to the placing of the final asphalt surface. The tack shall cover all surfaces and shall only be placed on one lane of the street at a time, and in a method to cause the least amount of tracking and inconvenience to the traveling public. The costs of the tack shall be included in the unit price for asphalt.

Asphalt Surface.

On top of the primer an average depth (compacted thickness) of 1 ½ inches of S-1 Recycled asphalt shall be uniformly laid. The mix shall be laid with a self-propelled spreader for all streets. The mix shall be placed to create a uniform crown (2%) in the pavement. Rolling shall be done with at least one 10 ton roller and one 2 to 5 ton roller all equipped with sprinkling systems in good operating condition.

Asphalt Feathering.

Vertical butt joints shall be milled at start and end of all resurfacings.

Manhole/Water Valve Adjustments.

Manholes, water valves, street grates, and other boxes in the existing pavement shall be chipped around to provide room for a 1 ½ inch thick overlay. If these items require risers to become level with the asphalt, the contractor will be responsible to do so. When this work is done the existing lids and covers must be cleaned of any asphalt, tar, or gravel so that an even final surface is created. This work must be done simultaneous with the paving operations.

Traffic.

Local traffic shall be able to use all streets during the reconstruction process. All private entrances shall be passable. The Contractor shall schedule his work to minimize hazards and delays, and shall take every possible effort to promote safety. Signs, barricades and flagmen shall be utilized to protect the traveling public and to prevent damage to their vehicles. The minimum number of signs shall include one for each direction of travel on each street.
